PEDAL REBELS

The transport sector generates the world's largest share of greenhouse gas emissions – about 30%. If we are going to reduce our emissions rapidly, our transport infrastructure needs to change but converting the world's fleet of vehicles to run on renewables is not the solution. There are still millions of tonnes of carbon embedded in the production processes and the transition can not possibly be made quickly enough. We are running out of time.

Technical minimalism and structural change are going to be essential to our transition to a carbon neutral society and cycling is the most efficient form of transport. Three times as efficient as walking and, in terms of raw energy use, 53 times more efficient than driving. This 19th Century transport innovation is going to be a major part of our 21st Century transport solution.

Extinction Rebellion's Pedal Rebels aim to disrupt business as usual and to bring attention to just how unsustainable our toxic transport system is. We also want to encourage healthier lifestyle choices and pressure governments to make cycling a safer transport alternative.

We regularly ride around Sydney's CBD and suburbs on weekdays and on weekends. Please join us.

No bike? No worries! We can loan you one or even gift you one – we recycle and repair found and donated bikes.

Our rides are fun, family friendly and the best way to ease yourself into climate activism with XR's beautiful rebellion.

To find out more about making a positive change and about how you can join the next ride, email pedal_rebels@protonmail.com or look for us in your socials using the hashtag [#pedalrebelssydney](https://twitter.com/pedalrebelssydney)
