Take the 7.6% Pledge
(it’s just 15 minutes of your time for the planet)

Do we want this?

Or this?

FACT: Science clearly says that we need an annual reduction in global greenhouse emissions of 7.6% every year this decade in order to have a chance of reaching the Paris Agreement goals. This is not happening.

The “15 Minutes for the Planet – the 7.6 Campaign,” from our Fridays for Future Montreal chapter, is being shared with FFF groups around the world. One goal of the campaign is to raise more support from the public for lowering emissions so that the planet will be saved for future generations.

The climate crisis is a global family crisis

To join the campaign, individuals and families are asked to do these easy things:

1. Sign this petition addressed to US Secretary John Kerry, Special Presidential Envoy for Climate, which supports cutting emissions by 7.6% per year this decade. Children can sign it, too.

2. Create a sign that says:

   “1.5 degrees Celsius requires 7.6% reduction in global greenhouse gases per year.”
3. Once a week, on Fridays, stand outside with your sign at 7:00 p.m. for 15 minutes. Advocate with your friends and family for lowering emissions and show your neighbors how crucial these numbers are. Remember to wear masks and follow social distancing guidelines.

4. **Register your campaign** to pin it on the FFF global map.

5. **Photograph your sign, then post** it on [Instagram](https://www.instagram.com) and [Twitter](https://twitter.com). Use the hashtag #7point6campaign.

6. **Display the sign** in your window or at your office until change happens.

These easy tasks make a huge impression and inspire action. You make a difference. **Thank you! This planet is depending on us.**
