

How to discuss the climate crisis in plain language

Your Climate Activist's Toolkit Should Include

The
“Environmental Education Series”
by environmental activist and climate expert

Dr. Tom English

NINE PRESENTATIONS TO HELP PEOPLE TO DISCUSS
THE UNCOMFORTABLE SUBJECT OF THE CLIMATE CRISIS

Clean energy. Sea level rise. 1.5 degrees. Most affected people and areas. Climate justice. Drought. Migration. Climate change denial. And more. We have a lot of problems to solve in order to stop climate change. How on Earth do we discuss the complicated and interconnected consequences of climate change?

The climate presentations by climate expert Dr. Tom English are a series of very informative, understandable online talks which dissect our current climate crisis in easy-to-understand language. Dr. English has generously offered recordings of his series of nine presentations to Fridays for Future activists as a way for us to get people talking and further open up courageous climate crisis conversations in a wide range of settings.

Do you need simple explanations of the complex issue of the climate crisis?

Dr. English's new presentations will provide you with facts and simple language to broach, tackle, and discuss dire environmental issues with your family, friends, and associates. Whether we like it or not, we face a difficult reality and a race with time to stop climate change now. Dr. English invites you to **click on the links below** for descriptions and arguments to easily understand and discuss today's overwhelming environmental challenges.

Thank you, Dr. English!
