DAMAGE TO YOUR WALLET

- **14% Average Household Increase.** Expect to pay an extra **$20 or more every month**—that is roughly **$240 a year** straight out of your pocket.
- **APS is too slow** in converting to less expensive Wind and Solar Power. They keep burning expensive fossil fuels.
- **"Hidden" Traps.** APS is trying to switch to a system called **"Formula Rates"** to bypass full state reviews and raise your electricity prices every single year.
- Arizona Attorney General Kris Mayes has formally stepped in to fight this hike. Local families living paycheck-to-paycheck shouldn't

have to subsidize massive power grid expansions built for tech billionaires and data centers.

Join the Northern Arizona Climate Change Alliance in Apache, Navajo, Coconino, and Yavapai Counties.

Northern AZ Climate Change Alliance
NAZCCA.org

WHO WE ARE: A coalition of citizens promoting renewable energy and lower emissions.

Our Mission is to inform, engage, and empower people of Arizona to counter climate change with renewable solutions. We are a grassroots group led and organized by Arizonans like you.

FIGHT THE RATE HIKE!

APS wants to raise your electric bill ANOTHER 14%!

WHY THE HIGHER RATES?

APS is not providing ratepayers with the lowest cost, safest energy, which is produced by Solar and Wind Power plants. Instead, they push expensive fossil fuel plants requiring more capital investment (paid by customers). This maximizes profit for the owner, Pinnacle West.

MAKE A DIFFERENCE

- **Ongoing:** The Arizona Corporation Commission (ACC) is wrapping up evidentiary hearings, and the public is aggressively pushing back.
- **Right Now:** ACC Regulators rarely give utilities 100% of the price increases they ask for IF the community organizes and speaks out! Comment to 602 542-4251.
- **December 2026:** The five elected ACC commissioners will cast their final votes
- **Early 2027:** If we stay silent, the rate hikes hit your bill next year

SUN & WIND POWER ARE BY FAR THE BEST SOLUTION

-Sunshine and Wind are free and VERY abundant in Arizona.

-These renewables create local jobs. NO import of oil or uranium from outside.

-No need for armed forces in the Middle East.

-You determine where and when to store the renewable power.

-No dangerous radioactive waste or carbon emissions.

-Using renewables reduces impacts like water shortages, unbearable heat, melting run-ways, dying forests, rampant wildfires, and nuclear shutdowns.

-Renewables do not require 15 years or $billions to build.

–With renewables, our deep concerns about climate change and its impacts are reduced.

HAVE AN IMPACT by ACTING NOW

- **Gather petition signatures**
  This issue is non-partisan, since all customers gain with lower rates.
- **On the petition sign up to volunteer**
  We are ready to support you to act with others now on rates and climate change.
- **File an Official Public Comment.** Let ACC regulators know you cannot afford to pay more just to keep your A/C running during brutal summers. Learn how to submit your comments on ACC Docket # E-01345A-25-0105 at 602- 542-4251.
- **Read the Full Legal Case**
  Stay informed on the state's official defense at the KTAR News AG Intervention Page or view the raw filings at the APS Regulatory Rate Case Portal.
- **Share this flyer** with friends, family, and neighbors
- **Tell APS Fossil Fuels cost too much!!**
  They are more expensive than renewable energy, they cost us $billions in climate damage, they destroy natural ecosystems, and they destroy our way of life in Arizona.

Renewable energy is a no-brainer. We can keep fossil fuels in the ground while using clean and renewable WIND AND SUN POWER!
